

AMEREX – 35113 4-20mA generator

35113 4-20mA Generator

AMEREX Integrated 35113 4-20mA generator module is an ideal tool for checking 4-20mA inputs. The ergonomic design makes it perfect for checking a node device and checking the output of a 4-20mA devices output.

The 4-20mA generator features a dual line display which indicates the set value and the actual value of the 4-20mA signal.

The unique design allows the user to connect a 4-20mA device and check the output current reading through the 35113 and display unit.

The 35113 has up and down membranes which allows the user to accurately adjust the output from the generator to a tenth of a mAmp.

The 35113 also has the facility to connect to another 4-20mA device via the input terminals which then allows the user to see the current flow from that device.

Benefits AT A GLANCE:

- Portable / small construction
- Ergonomically designed enclosure
- Up and down keys to set the 4-20mA current of the generator.
- Power saving functions
- Input for external 4-20mA device
- Menu key
- Internal battery pack (1xPP9 battery)
- Dual line display – Set and actual current reading
- Indoor enclosure
- Ergonomically designed enclosure
